QDx Pathology Services Expands Capabilities and Office Space

The company will move operations to Edison, N.J. this spring

Edison, N.J. (Apr. 12, 2021)—[QDx Pathology Services](#), a national, independent full-service anatomical and molecular pathology laboratory, is moving all operational components to a new office space in Edison, New Jersey's Federal Business Center in April, doubling their square footage as a result of QDx's exponential growth over the past four years. Cushman & Wakefield, a global commercial real estate services firm, served as the broker for the new space.

"Since 2017, our company has grown from under 100 employees to 240 team members and counting," says Debbie Pacyna, Senior Vice President of Laboratory Services at QDx. "Our new space will undoubtedly improve operations and enhance our stellar customer service wing. The QDx team worked incredibly hard last year to meet the needs of a global pandemic while continuing to serve our core customers, and this stunning new space is a testament to their dedication and drive."

QDx's new office will occupy almost 40,000 square feet, a substantial increase from the previous lab's 20,000 square feet, and will feature a total of six brand new laboratories with expanded technology. These labs will be dedicated to various pathological practices including anatomical, molecular and next-generation-sequencing. Thanks in part to the lab's larger footprint and an "innovation room," in which staff pathologists will refine and develop products, several brand-new molecular tests will be available to clients during 2021.

QDx redesigned the space with both clients and employees in mind. Team members will enjoy an innovation room, mother's room, meditation room, locker rooms with showers, an expanded break room and large dining hall.

QDx Pathology Services, founded in 2006, is led by M. Nasar Qureshi, M.D., Ph.D., a recognized leader in the industry for diagnostic excellence. He completed his professional training at Tulane University School of Medicine, Mount Sinai Hospital, Beth Israel Medical Center and North Shore University Hospital in virology and immunology. Dr. Qureshi specializes in clinical and anatomical pathology.

QDx offers COVID-19 tests, molecular UTI panel, comprehensive gastrointestinal solutions, uropathology, women's health testing as well as hereditary cancer testing.

QDx's new office is located at 300 Columbus Circle in Edison, New Jersey at the Federal Business Center, located near the intersection of I-95 and I-440. To learn more or contact QDx, visit qdxpath.com.
